UI/UX Designer with 2.5 years designing web products end-to-end. Focused on interaction design, behavioral systems, and shipping decisions that actually make it to production. Live work in daily use since 2022, plus 10+ client products across BuiltInTech.

EXPERIENCE

- Community Dreams Foundation** | UI/UX Designer 02/2026 - Present
- UI/UX Designer across three healthcare products under CDF, leading with Phoenix AI; an AI health platform unifying wearable, activity, and lab data into actionable insights
 - Own platform and mobile app UI, brand cohesion across web and social surfaces, wireframes, prototypes, design systems, and motion design
 - Design low- and high-fidelity Figma flows, run async design reviews via Slack, and apply behavioral and state-visibility principles across nonprofit product work
- BuiltInTech** | Co-Founder, UI/UX Designer 01/2023 - 12/2023
- Owned end-to-end design for 10+ client web products: discovery → wireframes → responsive UI → post-launch iteration. Personally handled implementation and deployment on every project — designed it, built it, shipped it.
 - Translated unstructured client briefs into structured user flows and component libraries, refined against real usage data
 - Drove 80% of new client acquisition through direct outreach, scoping conversations, and trust-building
 - Recruited and managed KL University interns through live project workflows
- Areksoft Technologies** | UI Designer & Frontend Developer 08/2022 – 12/2022
- Designed and built responsive web interfaces in a production environment
 - Supported brand and digital campaigns through Figma, Canva, and social asset design
- NRI Wellbeing Services** | UI/UX Designer & Frontend Developer (Intern) 01/2022 – 07/2022
- Designed and shipped nriwellbeing.com end-to-end for an ISO-certified services company. Owned it zero-to-one: information architecture across 10+ services, responsive UI, and implementation. Site in production use since 2022.
 - Structured a service-first homepage hierarchy across property, healthcare, logistics, and financial offerings so first-time visitors could locate the right service without prior context

PROJECTS

- SLU Alumni Connect** | Live: [View it here](#) | Case Study: [View it here](#) | [Github Repository](#)
- Designed alumni networking platform for Saint Louis University. Live in production.
 - Owned information architecture, UI system, and interaction design across profiles, search, messaging, and admin flows
 - Designed for scale from day one. Same component set carries every surface, FERPA constraints handled at the design layer.
- Starbucks Mobile Order Redesign** | Case study: [View it here](#) | [Behance](#)
- Diagnosed missing product state, not wait times, as the real failure. App modeled "ordered" and "ready" but skipped when the barista actually starts the drink.
 - Rejected GPS pickup, queue counter, and barista cam before landing on a four-state model tied to real barista actions
 - Designed one reusable state card with non-punishing language and amber for delays. Same component, four contexts.
- Resume Tailor** | Live: [View it here](#) | Case Study: [View it here](#) | [Github Repository](#)
- Diagnosed the real failure of the Streamlit prototype: 20-second cold-start killed the tool in the moment of use. Model quality was fine. UX broke it.
 - Designed honest scoring, not flattering scoring. Match results surface covered keywords in green, missing keywords in amber, with specific reframing suggestions. Refused the instinct to inflate the after-score.
 - Designed for trust: files never leave the browser until the user commits, every URL in the output validated against source text, no black-box score.
 - 8 deterministic ATS validation checks with visible detail per check.
- Portfolio Site** | Live: [View it here](#) | Case Study: [View it here](#)
- Designed three portfolio phases: static launch → dark editorial identity with RAG-powered chatbot → mobile-first product rebuild with draggable UI
 - Designed the chatbot as a recruiter interface, not a novelty. Trained on 8 knowledge files covering case studies and career narrative so it answers concrete questions with concrete answers.
 - Rebuilt every Phase 3 component from scratch then extended upward. Not responsive overrides on a desktop design.
 - Editorial design language: Bricolage Grotesque, indigo accents, hairlines not shadows.

SELECTED MOTION DESIGN

Short-form motion where timing carries the idea.

- Ted Drewes | Concrete in Motion (2026)
- Nike | Displayed (2026, concept)
- McLaren | Delta (2026, concept)

SELECTED WRITING

Design series on **Medium**, Two featured in **Design Bootcamp**

- The hardest part of UX isn't the user. It's the person paying you. | Design Bootcamp, July 2026
- The Starbucks app says "Preparing." That word is the bug. | Design Bootcamp, Jun 2026

Full series at medium.com/@harshaasapu.b

TECHNICAL SKILLS

Design: Figma (Auto Layout, Components, Prototyping, Responsive), Design Systems, Wireframing, Interaction Design, Motion Design, UX Research, Usability Testing, Information Architecture, Journey Mapping, FigJam, Low- and High-Fidelity Prototyping

AI for Design: OpenAI API, RAG Systems, Prompt Design, Framer

Process: Agile, Jira, Behavioral Design, MoSCoW Prioritization, Iterative Design

Build (working knowledge): React, Next.js, TypeScript, Framer Motion, Tailwind, HTML/CSS, Git

EDUCATION

Masters of Science in Information Systems, Saint Louis University | Dec 2025

Bachelors of Technology in Computer Science, KL University | May 2023
