

Harsha Asapu

Product Designer

Reno, NV | +1(314)226-6301 | harshaasapu.b@gmail.com | OPT Authorized | Open to Relocate
[Portfolio-website](#) | [LinkedIn](#) | [Published in Design Bootcamp: Medium.com](#)

Product Designer with 2.5 years shipping web products end-to-end. Focus on interaction design, behavioral systems, and design decisions that reach production. Live work in daily use since 2022, plus 10+ client products across BuiltInTech and 3 published case studies.

EXPERIENCE

Community Dreams Foundation | Product Designer 02/2026 - Present

- Lead designer on Phoenix AI, a health platform unifying wearable, activity, and lab data into actionable insights.
- Own platform and mobile app UI, wireframes, prototypes, design systems, and motion design across 3 healthcare products.
- Ship low- and high-fidelity Figma flows, run async design reviews via Slack, apply behavioral and state-visibility principles across nonprofit product work.

BuiltInTech | Founding Designer 01/2023 - Present

- Owned end-to-end design for 10+ client web products: discovery → wireframes → responsive UI → post-launch iteration.
- Shipped every design to production personally, no handoff friction, no designer/developer gap.
- Translated unstructured client briefs into structured user flows and component libraries, refined against real usage data.
- Drove 80% of new client acquisition through direct outreach, scoping, and trust-building.
- Recruited, mentored, and managed 12 interns from KL University through live client project workflows.

Areksoft Technologies | UI Designer 08/2022 – 12/2022

- Designed and shipped responsive web interfaces in a production environment.
- Supported brand and digital campaigns through Figma, Canva, and social asset design.

NRI Wellbeing Services | UX Designer (Intern) 01/2022 – 07/2022

- Designed and shipped nriwellbeing.com end-to-end for an ISO-certified services company. In production use for 4+ years.
- Zero-to-one ownership: information architecture across 10+ services, responsive UI, and implementation.
- Structured a service-first homepage hierarchy across property, healthcare, logistics, and financial offerings so first-time visitors could locate the right service without prior context.

PROJECTS

SLU Alumni: Institutional-scale alumni engagement platform | Live: [URL](#) | Case Study: [URL](#) | [Github Repository](#)

- Designed alumni networking platform for Saint Louis University. Architected for 12,000+ alumni records at institutional scale, validated with synthetic engagement data.
- Owned information architecture, UI system, and interaction design across profiles, search, messaging, and admin flows.
- Designed for scale from day one. Same component set carries every surface. FERPA constraints handled at the design layer.

The Missing State: Fixing Real-Time Fulfillment UX (Case Study) | Case study: [URL](#) | [Behance](#)

- Investigated why real-time fulfillment apps lose user trust between "ordered" and "ready." Used Starbucks mobile order as the primary case: the app modeled two states but skipped the one that mattered, when the barista actually starts the drink.
- Rejected GPS pickup, queue counter, and barista cam before landing on a four-state model tied to real barista actions.
- Designed one reusable state card with non-punishing language and amber for delays. Same component, four contexts.

Resume Tailor: An ATS Match Tool That Refuses to Flatter | Live: [URL](#) | [Github Repository](#)

- Diagnosed the real failure of the Streamlit prototype: 20-second cold-start killed the tool in the moment of use. Model quality was fine. UX broke it.
- Designed honest scoring, not flattering scoring. Covered keywords in green, missing in amber, with specific reframing suggestions.
- Designed for trust: files never leave the browser until user commits. Every URL in output validated against source text.
- Built 8 deterministic ATS validation checks with visible detail per check.

Portfolio v3: A Recruiter Interface, Not a Novelty | [Live: URL](#) | Case Study: [URL](#)

- Designed three portfolio phases: static launch → dark editorial identity with RAG-powered chatbot → mobile-first product rebuild with draggable UI.
- Designed the chatbot as a recruiter interface, not a novelty. Trained on 8 knowledge files covering case studies and career narrative.
- Rebuilt every Phase 3 component from scratch, not responsive overrides on a desktop design.
- Editorial design language: Bricolage Grotesque, indigo accents, hairlines not shadows.

TECHNICAL SKILLS

Design: Figma, Design Systems, Wireframing, Interaction Design, Motion Design, User Research, Usability Testing, Information Architecture, Journey Mapping, Prototyping, FigJam

AI for Design: OpenAI API, RAG Systems, Prompt Design, Framer

Process: Agile, Jira, Cross-Functional Collaboration, Behavioral Design, MoSCoW Prioritization, Iterative Design

Build (working knowledge): React, Next.js, TypeScript, Framer Motion, Tailwind, HTML/CSS, Git

EDUCATION

MS in Information Systems, Saint Louis University | Dec 2025

B.Tech in Computer Science, KL University | May 2023

SELECTED WRITING

Published in **Design Bootcamp (Medium)**

- “ The hardest part of UX isn't the user. It's the person paying you. ” | July 2026
- “ The Starbucks app says ‘Preparing.’ That word is the bug. ” | Jun 2026

Full series at medium.com/@harshaasapu.b

SELECTED MOTION DESIGN

Short-form motion where timing carries the idea.

- Ted Drewes | Concrete in Motion (2026)
- Nike | Displayed (2026, concept)
- McLaren | Delta (2026, concept)
